- g) Autonomous Community of Murcia.
  - a. Provincia de Murcia
- h) Autonomous Community of Valenciana.
  - a. Provincia de Alicante
  - b. Provincia de Castellón
  - c. Provincia de Valencia

The Project aims to provide service in the whole Spanish territory.

#### **4.- Conclusion.**

The domiciliary medical urgent services, domiciliary nursing and domiciliary hospitalization are all means to reduce costs, as it has been proved by some surveys. For instance, domiciliary hospitalization represents 18% of the total cost of institutional hospitalization. On average, the days of hospitalization are higher but the average total costs per day are five times lower than the cost of an hospitalized patient. These significant cost reductions are a consequence of: medical specialists' fees, interconsultation services, hospital costs, usage of specialized services (Intensive Care Unit) and diagnostic tests.

All in all, there is no doubt that having a good service of domiciliary medical assistance and nursing involves an added value for an insurance company and it offers soundness and a good performance to reach the main objectives, a good patient service and the reduction of costs for the companies.
